CHARGING SURFACE

On the outside, this is our signature, stylish Corian® solid surface. **What makes this unique is what's underneath.**

## Introducing **DuPont™ Corian® Charging Surface**

Now you can offer clients a solid surface that will charge smart devices **wirelessly.**

Hidden from view is a transmitter that powers up smartphones, tablets and more, wirelessly. Energy is transferred safely from below the Corian® surface, to a smart device – charging stops when your battery is full.

Diagram illustrates placement of Individual Charging Unit.

**Durable, stain resistant, easy-to-clean – every stylish hue and pattern of Corian®, is available for wireless charging integration.**

Not only does its nearly seamless form provide virtually limitless design options, Corian® Charging Surface is the perfect addition to modern smart homes, retail environments and more.

### **How does it power up?**

Just below the Corian® Charging Surface, a transmitter transfers energy wirelessly to a receiver within or attached to your smart device. Plus, the surface is smart - charging stops when your device has reached maximum battery capacity. It's the ideal solution for kitchens, hospitality areas – anywhere!

# Here's how to wirelessly charge smart devices:

- 1** Select a Corian® surface colour from the hues and patterns available.
- 2** Decide where in your designs, a charging surface(s) will work best.
- 3** A DuPont™ Corian® fabricator\* will install the device(s) along with the surface installation.
- 4** Once installed, place your wireless enabled device (or connect a wireless charging ring for non-wireless enabled devices) over the charging spot and power up begins automatically. Charging stops when battery is full.

Wireless Enabled Device

Non Wireless Enabled Device

**It's that simple!**

## There are two Corian® Charging Surface options:

### The Individual Unit

A single charging unit that once installed, is a plug and play system that works instantly for customers who are ready to power up now.

### The Powermat® Platform

Cloud-based technology offers the enhancements of full online connectivity for backend management.

This option allows you to offer a useful amenity and harness insightful data through a connected network. A dashboard shows unit utilization and customer length of stay. Remote diagnostic services and customer engagement tactics offer real-time capabilities. ^

**Power up your customers and your business with Corian® Charging Surface.**

\* An authorized Corian® fabricator/installer has the needed expertise to install the Individual Wireless Charging unit underneath the surface. This requires the fabricator/installer to mill out an area on the underside of the surface to enable the induction process to occur. If a device is already Qi or PMA enabled, customers will not require a wireless charging ring or charging case to power up.

^ Installation of the Powermat® unit requires third party support. For more information, contact CASF Australia.
