# LIGHT REFLECTANCE VALUES OF DUPONT™ CORIAN® SOLID SURFACE COLORS

## INTRODUCTION

This bulletin provides Light Reflectance Values (LRV) for the colors of DuPont™ Corian® solid surface. LRV is useful when designing spaces for visual contrast or light reflectivity.

## OVERVIEW

The LRV is a measurement of the overall amount of light reflected from the surface. For aesthetics with significant color variation, the value reported is an average representing the overall shade. The LRV may be used to determine the visual contrast between two different materials where it is important that an object be visibly distinct, such as letters on a sign, handrails or stair treads.

In addition, the light reflectance value of a material is also used to calculate lighting requirements for a room. High LRV material on ceilings, floors and walls help reduce lighting requirements by reflecting existing light, either from light fixtures or daylight. Many paint companies are now providing the LRV for each color of paint for this purpose.
